

λ-NET-MANAGED-INTERNET-ACCESS

Key Benefits

- Managed Security
- Remote Access
- Secure Internet Access

Managed Internet Access

You want to safely connect employees in your headquarter or in your offices to the internet? Your field service requires protected access to centralized applications of your company? λ-Net-Managed-Internet-Access provides powerful solutions for such requirements.

Flexible solution

From the large portfolio of an experienced provider, you can select the access rate and tariff model that best suites your requirements. In case you require hardware, we can operate the router at your facility. The LambdaNet security team will establish a security policy in cooperation with you and will manage your dedicated firewall.

Flexible broadband technology

Using scalable bandwidths from 2 Mbps, we make sure you always have fast internet access.

Focused on service

In the center of Germany, LambdaNet operates a Network Management Center to which our customers have direct access. You will never have to bother about automatic voice responses or call center delays.

Our service employees know the nuts and bolts of our network and they are personally available to you 24 x 7.

Customizable solutions

You may require only a small bandwidth to connect your headquarter or your subsidiary, but you need a high performance connection for your web server? In such cases, we recommend to use a corporate access at 2 Mbps while connecting your web server to one of our 26 data centers at 100 Mbps.
